

What's New in GideonSoft 2023 Release 2

Introducing the latest GideonSoft release! Along with performance enhancements and bug fixes, we've added tools for more efficiently importing and managing people, and made report design even more sophisticated!

Get The People Moving!

Change

More Module In-Processing Options ... Settings can now include global profile fields, display a date picker or picklist fields, and use an expression builder for a username field. Settings can also be copied from one category to another.

Change

Expanded Persistent Module In-Processing Capabilities ... We've added In-Processing categories (just like the Performance Module process), a queue (for review), an option to create a user account, as well as more assignment options.

Feature

Better Admin Visibility ... We added the ability to send In-Processing notifications to admins, when people join GideonSoft via QR code or email.

Feature

Streamline The Moving Process ... Admins can use presets to set default usernames, passwords and identifiers when moving multiple people at one time.

New Persistent Module In-Processing Category Fields

An Expanded Report Design Toolkit!

Change

More Sophisticated PDF Export Options ... Such as setting the default orientation.

Feature

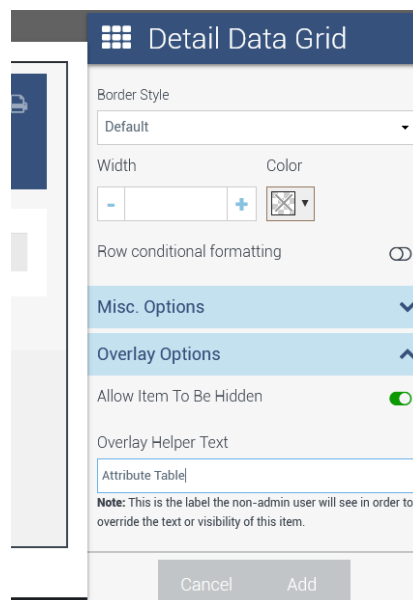

Overlay Functionality ... Designers can allow report administrators to hide selected report items or allow them to customize displayed language.

Design

Organize Your Work ... In Report Design mode, you can now sort and filter your report design list and view more details about them. Including a new kind of detail...

Design

(New) Report Categories ... These can be used to sort and filter reports in the list of report designs (for internal use).

New Report design Overlay options

GideonSoft Models Are All the Rage!

Change

Start Modeling Much More Easily ... The Model Builder now has 2 modes: "Progress Report" mode (for profile visualizations), and a new "Model Only" mode (to help build out the Measurement Model).

Design

A Whole New Face ... We redesigned the Measurement Model user interface to make it much easier to get started: new navigation layout, functionality, labels, and icons.

Events	Physical					Behavioral				D4
	High Jump	Intelligence	Shuttle Run	Speed	Strength	Blocking	Catching	Tackling	Throwing	
Main Container	✓	✓	✓	✓	✓	✓	✓	✓	✓	
Flicker 1 Test	✓	✓	✓	✓	✓	✓	✓	✓	✓

Other Miscellaneous Changes or Updates

Change

Updated API Integration with the LDRX platform.

Change

Launched a new Support site: What's New in GideonSoft; an expanded, searchable Knowledge Base, and a more integrated help request form.

Feature

More sophisticated enforcement of roles and permissions, for appropriate access restriction.

Design

On the Instance Home Page, we've added the ability to select/display one or more roles.
